DATA CLEANING LOG & INTEGRITY AUDIT

Project 1: Data Cleaning & Preparation

Prepared By: Shashwat Panda

1. Executive Summary

The objective of this audit log is to document the explicit transformations performed on the raw transaction dataset. Raw data contains structural anomalies, formatting noise, and missing records that compromise its data integrity. By executing systematically tracked data transformations, this pipeline establishes a production-ready "Gold Standard" source of truth for downstream business intelligence and reporting tools.

2. Core Data Transformation Ledger:

Change ID	Description	Impact	Status
CR001	Removed duplicate records based strictly on OrderID.	Ensured absolute uniqueness of transactional counts.	Resolved
CR002	Standardized all transaction dates to strict ISO 8601 format (YYYY-MM-DD).	Achieved 0% error rate on dates across all 1,200 records.	Resolved
CR003	Imputed 309 missing rows in CouponCode with categorical identifier 'NONE'.	Preserved 100% of rows, completely avoiding statistical power loss.	Resolved
CR004	Applied explicit numeric rounding to the UnitPrice and TotalPrice column.	Standardized financial items to a strict precision of 2 decimal places.	Resolved
